

NYMarc Update
As of March 4, 2010

Iroquois' NYMarc project is proposed to connect emerging Marcellus Shale supplies to Iroquois at Pleasant Valley via a new 63 mile long 36-inch diameter natural gas pipeline.

The Open Season closed on Friday, January 29, 2010, and we received sufficient interest to advance the project. We are working to negotiate binding agreements with the interested parties and are targeting a November 1, 2014 in-service date. Questions may be directed to Todd White at 203-925-7284 or todd_white@iroquois.com
