

Drive Mapping Settings

The first time IOL is launched on any given computer, users will be presented with a Citrix File Security dialog. This dialog permits IOL to link the drives on your machine, including USB drives, to the Citrix session. Iroquois suggests that users select "full access" and "don't ask me again for this application."

If this is not selected, a user will be prompted the next time they log in and will **not be able to** download files from IOL until this dialog box is selected.
