

## Scheduled Maintenance – Pipeline Internal Monitoring

Iroquois will be performing an internal inspection of its pipeline from Wright, NY to South Commack, NY. The project is expected to begin April 11 and be completed by April 27. A computerized device, called a “smart tool” in the pipeline industry, will be inserted into the pipeline and will be pushed through the line at a controlled speed by the pressure of natural gas.

There are several locations, indicated below, where this tool will be launched and received during this process. The activity will occur twice at each location, as a pre-run of a “gauge tool” will be performed to assure cleanliness and passage of the “smart tool”. The planned work will have no effect on local gas distribution service.

The process of insertion and extraction of the device(s) requires a depressurization of the launcher and/or receiver barrels. During this process, the pressurized gas in the barrels will be redirected into the system, resulting in only a very small amount of natural gas being released to the atmosphere. It is possible during this phase of the project you may detect the smell of natural gas odorant and, perhaps, hear a noise associated with the depressurization of the launcher or receiver.

The associated venting for each activity will take approximately five to ten minutes while the total work for each activity may take several hours to complete. While we do not anticipate any disruption or concern to nearby residents, this notice is intended to inform you of the activity.

This procedure provides Iroquois with valuable information concerning the integrity of our pipeline, thereby continuing our commitment to our neighbors and customers to deliver natural gas safely and reliably.

The following schedule provides the locations and approximate times for the launching and receiving of the devices. This schedule will be updated to reflect any changes that may occur.

### In-Line Inspection Schedule\* - Gauge Tool

Date	Time	Location	Activity
04/11/22	Morning	Wright, NY	Launch Tool
04/12/22	Mid-Day	Pleasant Valley, NY	Receive Tool
04/11/22	Morning	Pleasant Valley, NY	Launch Tool
04/12/22	Morning	Milford, CT	Receive Tool
04/12/22	Morning	Milford, CT	Launch Tool
04/13/22	Morning to Mid-Day	South Commack, NY	Receive Tool

\*Dates/Times may vary and are subject to change.

### In-Line Inspection Schedule\* - Smart Tool

Date	Time	Location	Activity
04/19/22	Morning	Wright, NY	Launch Tool
04/20/22	Morning	Pleasant Valley, NY	Receive Tool
04/21/22	Morning	Pleasant Valley, NY	Launch Tool
04/22/22	Morning	Milford, CT	Receive Tool
04/26/22	Morning	Milford, CT	Launch Tool
04/27/22	Morning	South Commack, NY	Receive Tool

\*Dates/Times may vary and are subject to change.
